A Texas Leader in Clean, Reliable Electricity

Calpine was established on the premise that a strong commitment to the environment is inextricably linked to excellence in power generation and corporate responsibility. That’s why Calpine is a state leader for dependable, environmentally responsible power generation. Today, Calpine is capable of delivering more than 7,400 megawatts of clean, reliable and cost-effective electricity for the Texas power market – representing almost 10 percent of the state’s installed capacity.

Safe, Low-Emissions and Energy-Efficient Power

In Texas and across the United States, Calpine’s natural gas power fleet is setting new standards for safe, low-emissions and energy-efficient power generation. Combined-cycle design and advanced emissions control technologies enable Calpine to dramatically reduce emissions compared to older fossil-fuel facilities. Our combined-cycle plants consume up to 40 percent less natural gas per megawatt-hour-produced than older technology plants and are recognized by leading environmental and safety organizations, including:

- The Environmental Protection Agency
- The U.S. Department of Energy
- Regional Chapters of the American Lung Association and Sierra Club
- Natural Resources Defense Council
- The U.S. Department of Labor’s Occupational Safety and Health Administration

About Calpine

Calpine Corporation is helping meet the needs of an economy that demands more and cleaner sources of electricity. Founded in 1984, Calpine is a major U.S. power company, capable of delivering nearly 25,000 megawatts of clean, cost-effective and reliable electricity to customers and communities in 16 states in the United States and Canada. The company owns, leases and operates low-emission, natural gas and renewable geothermal power plants.
